- (a). Differs between people. In the last 5 years; Specify the number of years or amount of time.
- (b). Yes; People who are likely to receive a fine would want it smaller. People who have received a fine know how valuable it is. Law abiding citizens most likely don't know the ticket cost of running a stop sign and likely don't care about the price seeing as they obey the law.
- (c). Based on lived experience people would answer somewhat accurately but with heavy bias with yes/no. Having more survey options gives room to select the best fitting response, however I'd assume most people wouldn't out themselves saying they definitely watch too much television. So, I think the second option would be more accurate, but still suffer from not accurately indicating outliers.
